11.1

D) Beigniz at
$$K_{L}$$
:
$$K_{L} = \frac{Z_{L} - Z_{0}}{Z_{L} + Z_{0}} = 0,5026 \ 2 - 31^{\circ}$$

Deregning and der maximale og der minimale streem På keblet:

$$I_{MAX} = I^{+} \cdot (1 + |K_L|) = 1 \cdot (1 + 0,5026)$$

= 1,5026 A (spide)

$$I_{NIN} = I^+ (1 - |K_L|) = 1 \cdot (1 - 0.5026)$$

= 0.4974 A (spids)

d) Beigning out strommer igenmen ZL.

$$I_{ZL} = I(0) = I^{+} ||-K_{L}||$$

$$I_{ZL} = I(0) = I^{+} | |-K_{L}|$$

$$= I^{+} | |-0,50262-31^{\circ}|$$

$$= 0,6253 A (spids)$$

Designing at adstances due betastninges the derste strommur. Strommer tean beregnes weel:

$$I(x) = I^{\dagger}(x) + I(x)$$
$$= I^{\dagger}(x) \cdot (1 - K(x))$$

Vi Scetter $I^+(x) = 1 A$ of beregner den numeriske bonds (Stremstyrten) veu:

$$|I(x)| = |I - K(x)|$$

Dette kan askuelyspores ved dette viserdicgram:

For at temme M marshlinger steal - KL duejes virted op givet wea:

Ud for veltyteket $K(x) = K_{\perp} \cdot e^{+j^2\beta l}$ see det, at 360° cerainy i q svaver to 1/2.

$$K(x) = K_{L} \cdot 1 L 2 \beta x = K_{L} \cdot 1 L \frac{217}{\lambda} \cdot 2 x$$

$$= K_{L} \cdot 1 L 277 \cdot \frac{x}{2}$$

Vintal q svouer derfor til:

$$d = \frac{\varphi}{360^{\circ}} \cdot \frac{\lambda}{2} = \frac{\varphi}{720^{\circ}} \cdot \lambda$$
$$= \frac{149}{720} \cdot \lambda = 0.2069 \lambda$$

f= 100 MHz Zo= 50Ω

SWR =
$$\frac{V_{MAX}}{V_{min}} = \frac{10}{5} = 2$$

$$|K_L| = \frac{SWR-1}{SWR+1} = \frac{2-1}{2+1} = \frac{1}{3}$$

Ad. dissums ses, at 1/4 = 80-30 = 50 cm (Adstander mellem $V_{\text{max}} \circ S V_{\text{nin}} \text{ er altid } 1/4$) Derved dis:

b) Vi har et minimum 30 cm du belestninger:

$$d = \frac{0,30}{2,00} = 0,15 \lambda$$

Vi ved at 1λ somer th 720° descending i'repletesionskoefficients.

Fases ad Ky kin hu beregnes sum:

Veleterdiques siver devitagnet of levadrantes.

Ad diques das det endelige resultat:

Bergning at ZL:

$$Z_{L} = Z_{0} \frac{1 + k_{L}}{1 - k_{L}}$$

$$= 50 \cdot \frac{1 + \frac{1}{3} 2 - 72^{\circ}}{1 - \frac{1}{3} 2 - 72^{\circ}} = 60,322 - 36^{\circ}$$

$$= (49,10 - j 35,03) \Omega$$

(4) C) Ze kan realiseus enten som en sevietorbindelse eller som en parallelderbindelse (og selvfolgelig også på andre exotiste mider).

Her vises begge. Da imaginardules at ZL er negative en det en supacitiv impedans, og det vil voice on moderand of on teandersator, vi steal have gat i.

Serie dorbindelse

$$Z_{L} = 49,0 - j35,03$$
 SZ

$$\begin{array}{c|c}
R & C \\
\hline
C = 49,1 & R \\
\hline
C = 45,4 & pF
\end{array}$$

Formler:

Seriedorbindelse:
$$Z_{RES} = Z_1 + Z_2$$
 [Ω]
$$Z = R + j \times [\Omega]$$

$$X_{C} = -\frac{1}{\omega C} [\Omega]$$

Pavallelderbindelse

(5)

$$R = 74,1 \Omega$$

$$C = 153 \Omega$$

$$R = \frac{1}{49,10-j35,03} = (13,50+j9,63) \text{ mS}$$

$$R = \frac{1}{12,505-5} = 74,09 \Omega$$

$$C = \frac{1}{12,505-5} = \frac{1}{12,505-5} = \frac{9,635-3}{217.158} = 15,32 \text{ pF}$$

$$Z = R + j \times$$
 [\Omega]
 $Y = \frac{1}{Z} = G + j B$ [S]
Parallel forbindelse: $Y_{RES} = Y_1 + Y_2$ [S]
 $B_c = \omega C$ [S]

Dette siver:

$$V^{+} = \frac{V_{MAX}}{1+|K_L|} = \frac{10}{1+\frac{1}{3}} = 7.5 \text{ V}$$
