

9) Tynsdefettet trather med Ft:

Magnet feltet skel trokke Fin med samme storrelse som Fi

Vi scotter dem by med hinards;

=>
$$I - \frac{m \cdot s}{6} = \frac{0.4 \cdot 9.82}{36} = 1.09 A$$

Laplaces low sizer at:

hullhet betyder at I stal lebe med wet for at fil

5.2

a) Magnethettet den I, udviser cylindersymmetri.

Don sumlede bandt pa stoffen en summen of de 4 dele:

Pga. symmetrien vil F1 os F3 udbalancere hinardan, da I2 laber huer sin vej i gren 1 os gren 3.

Magnetteltet dra II or sivet week!

På stykket @ dås: (v=a=a1m)

$$B_2 = \frac{5.477 \cdot 10^{-7}}{277 \cdot 0.1} = \frac{5.2.10^{-7}}{0.1} = \frac{10}{0.1} \cdot 10^{-7}$$

$$= 10.10^{-6} = 10 \mu \text{Wb/m}^2$$

For 4 423: (r= a+b= 0,25 m)

$$B_4 = B_2 \cdot \frac{0.1}{0.25} = B_2 \cdot \frac{10}{25} = 4 \mu Wb/m^2$$

Den samlede kundt bliver.

$$F = F_1 + F_2 + F_3 + F_4$$

= $F_2 + F_4$

=
$$I \cdot l \cdot B_2 - I \cdot l \cdot B_4$$

= $I \cdot l \cdot (B_2 - B_4) = 10 \cdot 0.45 \cdot (10 - 4) \cdot 10^{-6}$
= $4.5 \cdot 6 \cdot 10^{-6} = 27 \mu N$

$$R=1092$$

$$B = 1.3 \frac{Wb}{m^2}$$

$$V = 0.5 \frac{m}{6}$$

$$\overline{B} = 1.3 \frac{W_b}{m^2}$$

$$V = 0.5 \frac{m}{6}$$

a) Spandings bliver

=
$$1,3.0,07.0,5 = 0,091.0,5$$

= $0,0455 = 45,5 \text{ mV}$

b) Eglekt i medstandr:

$$P_{E} = \frac{V^{2}}{R}$$

Mekanisks egget:

$$F = \frac{P_{M}}{V} = \frac{P_{E}}{V} = \frac{(3 \cdot l \cdot v)^{2}}{V \cdot R}$$

$$= 8^{2} \cdot l^{2} \cdot v \cdot R^{-1}$$

$$= 1.5^{2} \cdot 0.07^{2} \cdot 0.5 \cdot 0.1$$

$$= 414.1 \text{ uN}$$

5.4

a) Dipolmomentat er sivet ved:

 $A \cdot m^2$

Normal enhads udeturen A findes.

$$\overline{M} = \begin{bmatrix} \cos 50^{\circ} \\ \cos 50^{\circ} \\ -\sin 50^{\circ} \end{bmatrix}$$

$$\hat{\eta} = \frac{\overline{\eta}}{|\overline{\eta}|} = \frac{\overline{\eta}}{1} = \overline{\eta}$$

os dermed:

$$\overline{u} = 18 \cdot \begin{bmatrix} \cos 50^{\circ} \\ 0 \\ -\sin 50^{\circ} \end{bmatrix} \quad A \cdot m^{2}$$

$$\overline{\mathcal{B}} = \begin{bmatrix} 2 \\ 1 \\ 0 \end{bmatrix} \quad \frac{Wb}{m^2}$$

Drejningsmomentet bliver:

$$\overline{G} = \overline{M} \times \overline{B}$$

$$= \begin{bmatrix} \cos 50^{\circ} \\ -\sin 50^{\circ} \end{bmatrix} \times \begin{bmatrix} 2 \\ 1 \\ 0 \end{bmatrix} \cdot 18 \quad \text{N.m.}$$

$$= \begin{bmatrix} \hat{x} & \hat{y} & \hat{z} \\ \cos 50^{\circ} & 0 & -\sin 50^{\circ} \\ 2 & 1 & 0 \end{bmatrix} \cdot 18 = \begin{bmatrix} \sin 50^{\circ} \\ -2\sin 50^{\circ} \\ \cos 50^{\circ} \end{bmatrix} \cdot 18$$

$$= \begin{bmatrix} 18 \cdot \sin 50^{\circ} \\ 36 \cdot \sin -50^{\circ} \\ 18 \cdot \cos 50^{\circ} \end{bmatrix} = \begin{bmatrix} 13,79 \\ -27,58 \\ 11,57 \end{bmatrix}$$
